LOT 504

A gold, amethyst and seed pearl cluster ring, collet set with the oval cut amethyst within a surround of seed pearls, with pierced foliate shoulders, detailed '14K', weight 3.3g, ring size approx P1/2.

Estimate: £100 - £150

Condition Report

504. The amethyst has a few inclusions and some rubbing to the facet edges of the amethyst. Some discolouration to the surrounding seed pearls, two seed pearls fairly badly damaged. Lead solder restoration to both shoulders, some file marks within the band by the mark detailed ♦J.K.D♦. No frame or glazed locket compartment remains at the back of the front. It is possible that the oval cluster is in association with the shank and that the ring is therefore reconstructed, the parts being of varying ages. The ♦14k♦ would suggest possibly American.
