LOT 571

A gold, platinum, black opal and diamond oval cluster ring, claw set with an oval black opal within a surround of circular cut diamonds, detailed '18ct Plat', weight 3.6g, ring size approx L.

Estimate: £180 - £220

Condition Report

The opal has some general surface scratching.

The opal does have a crack, running from the outer edge one-third of the way along its length. This looks to be largely confined to its surface and does not appear to currently threaten the integrity of the stone.

One or two of the claws holding the opal are showing signs of wear,

The diamonds are eight cut stones. The ring is rather dirty and the diamonds are looking rather subdued as a result.

Otherwise the ring has some typical light wear/scratching to the shank.
