## Condition Report

There is noticeable discolouration/tarnishing to the gold, particularly to the front of the locket.

The locket is likely to be higher than 9ct gold, but is unmarked.

Some very minor losses to the black enamelled edging, though quite a few nicks and nibbles to the enamel on the front in particular, noticeable when viewed under a 10x loupe.

One or two of the diamonds have chips.

Hinge in good working order.

The interior of the locket is in good condition.

The case is quite possibly original to the piece and is in good condition.
